Search Report
EIC 3600

To: MILA AIRAPETIAN Location: KNX-5C01 Art Unit: 3625 Wednesday, April 22, 2009 Case Serial Number: 10/688567	From: ROBERT FINLEY Location: EIC3600 KNX-2A80-C Phone: (571)272-8952 robert.finley@uspto.gov

Search Notes

Dear Examiner Airapetian:

Please find attached the results of your search for the above-referenced case. The search was conducted in the Business Methods Template databases appropriate for the application.

I have listed *potential* references of interest in the first part of the search results. However, please be sure to scan through the entire report. There may be additional references that you might find useful.

Dialog search results are presented in two formats, Word (.doc) and Acrobat (.pdf).

To navigate this document: use FIND function {Ctrl-F}
~~ will find the beginning of each group of results
^ will find the tagged items

Information on Dialog databases can be found at: http://library.dialog.com/bluesheets/

If you have any questions about the search, or need a refocus, please do not hesitate to contact me.

Thank you for using the EIC, and we look forward to your next search.

I. Potential References of Interest

...   displayed to the consumer. Using the client/server definitions in
the "one-click" system, an **order** is **placed** by a purchaser at the
client and received by the server. The server receives **purchaser**
information including identification of the **purchaser** , payment
information , and shipment **information** from the **client** . The **server**
 then assigns an **identifier** to the client and associates the identifier
with the received **purchaser** **information** . The server then sends to the
 client , along with the identifier, a document that identifies the item
and includes an order button...

Detailed Description
... In one embodiment, the first component 720 transmits only the data set
 726 to the **second** component 730. Therefore, in this embodiment, the
 second component 730 does not receive information 7 12, only
 identifiers for satisfied conditions. The second component 730 receives
 the **data** set 726 and makes an access control decision by applying a
 policy from the policy...

sends the information to the personal information manager for...

...for entering or selecting contact information. The display also includes
a number of buttons for **requesting** different types of geographic
information, such as maps, directions, weather and yellow **pages**
information. When the user clicks on one of the buttons, the personal

information manager utilizes an address or other location identifier associated with the contact **name** to format **a request** to a **geographic** information **server**. The **server** uses **the location identifier to** retrieve **the** appropriate **geographic** information for that **location**, and sends the information to the personal information manager for display.

  ...Abstract: to http documents. To keep up with user demand and to
provide fast response to **user   requests** for **information** and services,
Web **sites** deploy multiple Web servers. This paper is focused on how to
 select   the best   **server** , whose load is the lowest of all, for the
clients. This is one kind of...

... two accesses and the current access session number; the output
represents the load of the **server** . We **choose** the trapezoid function as
the membership function, and fuzzy rules are formed. When the name...

 Abstract: Replication of information among multiple World Wide Web servers is necessary to support high **request** rates to popular Web **sites**. A clustered Web server organization is preferable to multiple independent mirrored servers because it maintains...

... centralized vs. distributed decisions on redirection. Moreover, we analyze the reassignment of entire domains or **individual   client** requests, different types of status **information** and different **server selection**   policies for redirecting requests. Our results show that the combination of centralized and distributed dispatching...

...   Web authoring environment requires a further set of features--for
building, publishing, and maintaining a **site** . At the least, a **product**
should provide a simple mechanism for uploading pages to a server. But the
complexity of...

...hundreds of pages and thousands of links exceeds the human ability to
grasp and track **individual   elements** ; thus, authors need tools for
designing the structure of a site, for transferring that structure to a
server , for easily updating **selected** pages or elements, and for assuring
the continued viability of links.

Only a handful of the **products** we reviewed **address** these needs.
Fewer still combine such features with up-to-date HTML and
Microsoft/Netscape...
